Dear Doc:

You will find enclosed my trip report at long last. I am sorry it has taken so long to complete this file, but, as you might be aware, things have been a bit hectic. I don't think that the delay in the report has made any significant difference for, as far as I know, all items which needed attention have received it already.

The matter of the engraved glass for the 70mm film projector is not receiving any attention from our end and I believe the last time this subject came up that was the way it was left. If at any time you would like to have us make some of these plates, we would be glad to give you a quote and do so.

I would like to again request that we try some higher resolution, slower material in the 70mm camera for I feel that its performance could be improved in this way. In the meantime, we are making and supplying some slit cams for widths intermediate to those already at the detachments.

In recent days we have had some indication in informal correspondence from our people that rumors are rampant as to the future of the Project and the fate of the members of the various groups. I think I can report that our people are taking these in stride and that we do not need to give it serious attention at this time.

I am quite pleased by the reliability record which has been achieved in recent weeks and I hope that we can keep it going this way.

Sincerely,

attach:
